The Ball

Stylish subwoofer for both stereo and surround

As the name suggests, The Ball is almost spherical in shape. Modern in styling, The Ball contains a powerful 60 watt class D amplifier coupled with a 170mm long throw drive unit to create powerful and realistic bass reinforcement.
As well as possessing modern looks, The Ball uses modern technology to help with power consumption and ease of use.

The Ball has an automatic standby function so the unit will only power up when required. A remote control is also supplied to ease setup and to assist with 'on the fly' operation during use.
